

Please note that we only make a charge for the health check (which we consider an essential part of a pet's care) and then, after reviewing the lifestyle of the pet, we choose which vaccine to administer (a number of vaccines are now on a three year cycle, so not all parts are given every year).

There is **no** additional fee charged for the vaccine administered.

- **Dogs:**

Routine* vaccinations for dogs include Distemper, Hepatitis, Parvovirus, Leptospirosis and Kennel Cough (KC).

We advise starting puppies at their first vaccination with KC so that they are fully protected when they start puppy classes. It also allows them to get used to the "up the nose" vaccine as part of their routine vaccination program and meet any boarding kennel regulations for when owners go on holiday!

Puppies can go out and about one week after their second vaccination, allowing early socialisation.

- **Cats:**

Routine vaccinations for cats include Flu, Enteritis, Feline Leukaemia (FeLV) and Chlamydomphila.

We aim to send you a reminder every year when your pet is due for his/her annual health check. When you receive your reminder, please consider any points you may wish to discuss with your veterinary surgeon (make a list if necessary so you don't forget!) and, if possible, bring a sample of your pet's urine with you for health screening. (Please note that there is a small additional fee for this service.)

It is vitally important to keep your pet up to date with his/her vaccination program. Please do not hesitate to discuss any queries or concerns with us.

Further information about vaccines can be found on the Intervet website:

www.intervet.co.uk

* Excludes some vaccines, eg: rabies, herpes, Bb.
